PROFESSIONAL SUMMARY

Quantitative finance professional and Automation & Control Engineer from POLI-USP with 20+ years of experience across systematic trading, portfolio construction, trading systems, financial engineering, market risk and investment management. Hands-on Python/SQL researcher who develops and validates systematic strategies using long-history equity datasets, fundamental, price and macro features, walk-forward/out-of-sample testing, realistic costs and portfolio constraints. Experienced in translating hypotheses into implementable models, monitoring tools and controlled production workflows. Recent SSRN research examines regime-based factor allocation and the gap between machine-learning target labels and realized portfolio returns.

QUANTITATIVE RESEARCH PROFILE

- **Alpha & Strategy Research:** factor investing, trend following, long-short, cross-sectional selection, regime-based allocation, portfolio optimization and systematic multi-asset models.
- **Research Validation:** no-look-ahead controls, walk-forward/OOS testing, stress-period analysis, transaction and financing costs, drawdown, concentration and strategy-stability diagnostics.
- **Data & Modeling:** time-series analysis, regression, feature engineering, classification labels, triple-barrier methods, PCA, HMM/regime analysis, neural/fuzzy modeling, statistics, machine-learning concepts and signal processing.
- **Programming & Infrastructure:** Python (pandas, NumPy, SciPy), SQL, Jupyter, Git/GitHub, Bloomberg API, DMA systems and MetaTrader; experience with MATLAB, C++ and .NET.

SELECTED QUANTITATIVE RESEARCH

- **Systematic factor-allocation platform:** built a research pipeline using 40+ years of Brazil and Nasdaq market data, integrating fundamentals, price behavior, macro variables, ranking signals and portfolio-construction rules.
- **Portfolio construction:** designed cross-sectional selection and allocation models using inverse-volatility weighting, sector caps, cash handling, volatility overlays, concentration controls and operational dashboards.
- **Robust testing:** implemented walk-forward/OOS validation, no-look-ahead controls, stress-period reviews, realistic cost assumptions and monitoring of drawdowns, turnover and model stability.
- **Research-to-portfolio discipline:** investigated how statistically informative labels and models can fail after position sizing, portfolio aggregation, constraints and implementation costs.

PROFESSIONAL EXPERIENCE

FACT Investments - Sao Paulo, Brazil | Jul 2015 - Jan 2026

Managing Partner | Chief Risk & Compliance Officer

- Led quantitative strategy design and portfolio construction for multi-asset funds, including factor models, trend following, long-short strategies and risk-based allocation.
- Built Python- and SQL-based research and analytics pipelines combining market, fundamental and macro data with ranking signals, portfolio constraints and monitoring routines.
- Designed allocation rules using cross-sectional rankings, inverse-volatility weighting, sector caps, cash handling, volatility overlays and concentration controls.
- Implemented backtesting and model-validation workflows focused on traceability, no-look-ahead controls, walk-forward/OOS testing, stress periods, costs and drawdown behavior.
- Developed automated tools for portfolio analytics, risk, liquidity, performance, investment backoffice and management reporting, improving repeatability and decision speed.
- Connected investment research with implementation constraints, market/liquidity risk, model governance and auditable operating processes for regulated fund vehicles.

Anga Asset Management - Sao Paulo, Brazil | Jun 2013 - Jul 2015

Quantitative Trader

- Developed automated trading and risk-management systems for equities and derivatives, supporting systematic execution, position control and real-time monitoring.
- Built quantitative tools for strategy diversification, liquidity control, market analysis and execution support.

PROFESSIONAL EXPERIENCE - CONTINUED

Capital Investimentos - Brazil | Apr 2010 - Sep 2011

Consultant - Financial Engineering

- Designed real-time investment, optimization and analytics systems for equity portfolios, applying benchmark tracking, diversification, hedging and portfolio-monitoring techniques.

Secretaria da Fazenda do Estado do Ceara (SEFAZ-CE) - Brazil | Jun 2008 - Aug 2009

Consultant - Public Debt Management Systems

- Developed public-debt risk-management and hedging models for state-level fixed-income and financial operations, supporting scenario analysis and treasury decisions.

Itau BBA - Sao Paulo, Brazil | Mar 2005 - Nov 2005

Quantitative Desk Trainee

- Supported treasury operations through quantitative modeling for trading strategies, market stress testing and portfolio-risk reporting.

EDUCATION & CERTIFICATIONS

- **University of Sao Paulo (POLI-USP)**: B.Sc. in Automation & Control Engineering, 2004. Thesis: Investment Portfolio Optimization to Benchmark Tracking.
- **ANBIMA**: Brazilian Financial Managers Certificate (CGA), 2025.
- **New York Institute of Finance**: Risk Management Professional Certificate, 2022.
- **Fundacao Getulio Vargas (FGV)**: Postgraduate Degree in Business Law, Tax Law Emphasis, 2023.

SELECTED PUBLICATIONS & WORKING PAPERS

- **Simple Regime Rules, Not More Factors: A Historical Case Study in Factor-Curve Portfolio Construction**. SSRN Working Paper, 2026. [SSRN abstract 7170118](#)
- **Target Labels Are Not Portfolio Returns: A Triple-Barrier Failure Mode in Factor Investing**. SSRN Working Paper, 2026. [SSRN abstract 7177958](#)
- **Lima, R. S. A. & Costa, O. L. V. (2004)**. Robust Optimization Algorithms for Tracking Models in Investment Portfolios. SIICUSP, Sao Paulo.

TECHNICAL & MARKET EXPERTISE

- **Strategies**: factor investing, trend following, long-short, systematic allocation, cross-sectional ranking, volatility targeting and portfolio optimization.
- **Markets**: equities, derivatives, fixed income, ETFs/indices, multi-asset funds and Brazilian/U.S. market data.
- **Methods**: backtesting, walk-forward/OOS validation, time series, regression, feature engineering, triple-barrier labels, PCA, HMM/regime analysis, stress testing and tracking error.
- **Technology**: Python, pandas, NumPy, SciPy, SQL, MATLAB, C++, .NET, Jupyter, Git/GitHub, Bloomberg API, DMA systems, MetaTrader and analytical dashboards.
- **Research Operations**: data pipelines, model documentation, reporting automation, model QA, LLM-assisted research workflows and human-in-the-loop review.

RISK & GOVERNANCE DIFFERENTIATOR

Former Chief Risk & Compliance Officer with practical experience in market and liquidity risk, model governance, investment controls, auditability and regulated-fund operations. This background supports research that is not only statistically robust, but also implementable, monitored and defensible in production environments.
